Variables.py

```python
answer = "The answer to your query is "

q1 = "5 multiplied by 6"
a1 = 5 * 6
print(q1)
print(answer, a1)

q2 = "\n8 divided by 3"
a2 = 8 / 3
print(q2)
print(answer, "%.8f" % a2)

q3 = "\n8 divided by 3 without the remainder"
a3 = 8 // 3
print(q3)
print(answer, a3)
```

Run Variables

```
/Users/milton/Desktop/Intro-Python/Hello/.venv/bin/python /Users/milton/Desktop/Intro-Python/Hello/Va
5 multiplied by 6
The answer to your query is  30

8 divided by 3
The answer to your query is  2.66666667

8 divided by 3 without the remainder
The answer to your query is  2

8 module 3 (remainder only)
The answer to your query is  2

4200000 add 23090
The answer to your query is  4223090

4200000 subtract 7633
The answer to your query is  4192367
